OUR SERVICES

- Products are built or rebuilt to OEM specifications.
- Rolls to be reworked are **inspected** to make sure they are in good working order. Or, they will be **repaired** in our on-site machine shop.
- Compounds are **extruded** and **calendared** to meet each customer's unique needs.
- Rolls are **precision finished**: high-speed grooving (smooth or polished), threaded finishes or serrated finishes.
- High-speed precision **dynamic balancing** is essential for many applications.
- **Just ask.** We will bend over backwards to help a customer.

Overall Roll Diameter: up to 25" Roll Length: up to 183"

Strict Quality Control. Meticulous Attention to Detail.

Our success has been built on the ability to listen to and respond to our customers. Experienced sales and technical representatives are at the ready.

And a team of dedicated associates attend to your order.

mfletcher@fletcher-machine.com

We've been around awhile. Since 1963. We started by building the best woodworking machinery in the business. Still do. And we learned that to optimize machine performance you needed great rubber parts. To assure ourselves we were building only high-performing machines, we decided to make our own rubber parts in our Lexington, North Carolina plant. We build or rebuild our rubber products to the highest standards. Whether for a new machine or an old one. Whether for one of our machines or someone else's. **Built like we mean it. That's Fletcher.**
